🛡️

Assessed Threat Level: **Low**

The following vulnerabilities are ranked by Tenable's patented Vulnerability Priority Rating (VPR) system. The findings listed below detail the top ten vulnerabilities, providing a prioritized view to help guide remediation to effectively reduce risk.

Click on each finding to show further details along with the impacted hosts.

To learn more about Tenable's VPR scoring system, see [Predictive Prioritization](#).

## LOW SSH Server CBC Mode Ciphers Enabled

**Synopsis**

The SSH server is configured to use Cipher Block Chaining.

**Vulnerability Priority Rating**

Age of vuln: 730 days +

CVSSv3 Impact Score: 2.5

Exploit Code Maturity: Unproven

Product Coverage: High

Threat Intensity: Very Low

Threat Recency: No recorded events

Threat Sources: No recorded events

**Affected Hosts (1)**

[192.168.56.102](#)

**Description**

The SSH server is configured to support Cipher Block Chaining (CBC) encryption. This may allow an attacker to recover the plaintext message from the ciphertext.

Note that this plugin only checks for the options of the SSH server and does not check for vulnerable software versions.

**Solution**

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.
